Convenient grilling anywhere

Blickle supplies specially customised swivel castors for mobile outdoor kitchens

Cooking and grilling outdoors – no matter the weather: This is the vision of by DoT GmbH & Co. KG with their BURNOUT brand outdoor kitchens. Bissendorf-based DoT always strives for premium quality that combines resilient functionality with high-end aesthetics. Its outdoor kitchens must be mobile, which is why DoT relies on specially customised swivel castors from Blickle, the wheel and castor specialist from Baden-Württemberg.

Summer is grilling season: When the weather is nice, everyone loves to enjoy a meal outdoors with family and friends. With its BURNOUT outdoor kitchens, furniture manufacturer DoT in East Westphalia shows that this doesn't have to mean primitive cooking with an aluminium bowl over an open fire. The company produces modules and components that can be combined to create complete and entirely customisable outdoor kitchen setups – not just charcoal or gas grills, but counters, kitchen sinks and waste bins as well. Summer isn't the only time to cook outdoors: weather-resistant materials and sophisticated design ensure that BURNOUT kitchens are ready for cooking all year round.

No other castors could do the job

One important aspect of an outdoor kitchen is mobility. For quick setup and takedown on the patio or in the garden, it must be easy to transport the modules from A to B. DoT therefore offers castors as an alternative to fixed feet. However, the previously used castors with aluminium rims were not able to meet the high expectations of the manufacturer. Corrosion often resulted in oxidation after just a short time, which detracted from the high-end aesthetics of the kitchen modules. Plus, the castor locks were very stiff and difficult to operate. DoT therefore went on the search for a supplier that could deliver more suitable castors for its outdoor kitchens.

The requirements were clearly defined: The castors had to have protected bearings that would not allow any moisture to penetrate. They had to be designed for water to flow off so that freezing temperatures would not cause splitting of the wheel covering. DoT also wanted the coverings to have an appealing look and to feature the

company's logo. Eventually, the company found exactly what it was looking for from the wheel and castor specialist Blickle.

New tread prevents corrosion

Blickle developed a swivel castor for the mobile kitchen modules made of stainless steel with a bolt hole. This was combined with a wheel of the POTH series with thermoplastic polyurethane tread. The antistatic tread protects users from electrostatic discharges. It also leaves no tracks or discolouration on the floor. The wheel centre is made of high-quality nylon, which does not corrode, in contrast to the previous solution of aluminium. This guarantees that the castors continue to look great even after many years.

Blickle also equipped the swivel castors with the high-quality "Stop Fix" lock. The foot lever for setting and releasing the lock makes it considerably easier to operate than the competitor's previously used lock. The wheel centre has a covering that does not turn with the wheel, ensuring that the emblazoned BURNOUT kitchen logo is always right-side up. The Blickle castors entirely meet the high demands placed on them by DoT. They look good and roll smoothly, offering users both convenience and reliability.
